

FDRG Seminar

Experiments into Turbulent Impinging Jets: Swirling vs Non-Swirling

presented by

Dr Yasir Al-Abdeli

Thermofluids Research Group,
Edith Cowan University

Swirl features in a variety of industrial applications, ranging from gas turbine engines to particle separators. Impinging jets have also been widely researched for their use in the heat treatment and drying of solid substrates. This talk will present some of the results published from a recently concluded project comparing between non-swirling and swirling turbulent impinging jets, focussing on results derived from pressure measurements, CTA, flow visualisations and Infra-red thermography.

Date: Friday 15th April
Time: 4pm – 5pm
Location: 204:505
Curtin University, Bentley Campus

No RSVP required. For queries please email:
